The Secretary of Health, Education, and Welfare has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through May 31, 1979.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D. C. 20402. Price: $1.15 (single copy). Subscription price: $13.45 per year; $16.85 foreign.

INTRODUCTION

Selected References on Environmental Quality as it Relates to Health is a product of MEDLARS (Medical Literature Analysis and Retrieval System), the National Library of Medicine's computer-based citation retrieval system that is used to compile and produce its publications. *Index Medicus* encompasses the literature of biomedicine broadly; other bibliographies cover special subject areas.

This bibliography cites selected articles from about 2,400 biomedical journals. Each monthly issue includes references cited in the monthly *Index Medicus* for the corresponding month.

The citations in *Selected References* are arranged under subject headings which represent the central concepts in the articles. These subject headings are selected from NLM's controlled vocabulary *Medical Subject Headings (MeSH)** by trained indexers. The indexer selects the most specific applicable subject headings. For example, a paper on dieldrin would appear under DIELDREN, not under the broader INSECTICIDES. INSECTICIDES and other more general headings are used for general articles and for articles on those more specific concepts for which there are no individual headings in *MeSH*. If the desired references are not found under a specific term, the user should seek a more general term. (A convenient way to identify the appropriate general term is to browse in the hierarchic listing of *MeSH*). If the user wishes to search exhaustively for all citations on a general subject, he should scan the citations under both the general heading and all the more specific *MeSH* headings. For example, for citations on air pollution, one might scan AIR POLLUTION, and, additionally, DUST, SMOG, AUTOMOBILE EXHAUST, SMOKE, and AIR POLLUTION, RADIOACTIVE. (Terms followed by an asterisk [*] in the hierarchic listing of *MeSH* are used for machine retrieval from the MEDLARS system; they do not appear as subject headings in *Index Medicus*, but may in this bibliography.)

Subheadings are used to indicate a particular aspect of the subject. Subheadings appear in small capital letters indented under the subject headings. Under each subheading, citations are listed alphabetically by journal title abbreviation.

* Medical Subject Headings, published as Part 2 of the January *Index Medicus* (available separately from Superintendent of Documents).

Each bibliographic citation contains the following elements in order: title of the article in English (brackets indicate translated title); author (senior author if more than one); journal title abbreviation; volume number; issue, part or supplement; inclusive pagination; date of issue; and an abbreviation indicating the language of the article if other than English. Foreign language articles containing an English abstract are so indicated. Review articles list the number of references in parentheses.

Each citation is also listed in a separate Author Section under the name of the senior or sole author, with cross references from the second and third authors.
